FRITZ!BOX 7530

(for ADSL and FTTC connections)

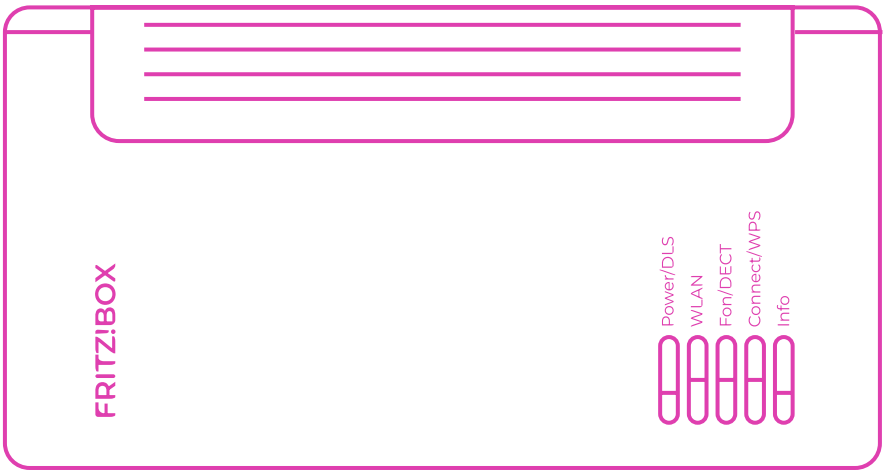

Installation

WARNINGS

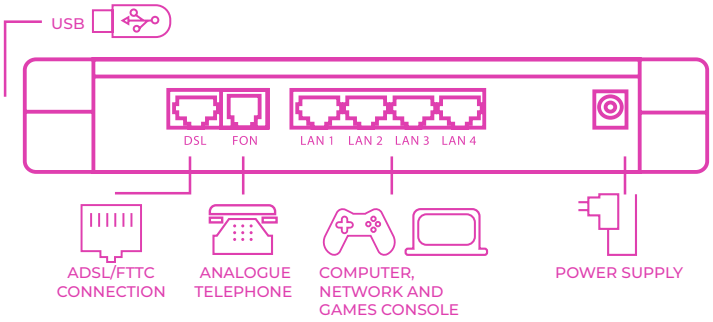

- To use the router, use the power supply provided or a device compatible with the electrical characteristics of the equipment.
- NEVER restore the router to its factory settings by means of a reset. This operation could make it necessary to replace the router.
- The router access password is on the label on the back of the device, under FRITZ!Box password.
- The password for the WiFi network is on the label on the back of the device, under WiFi password (WPA).

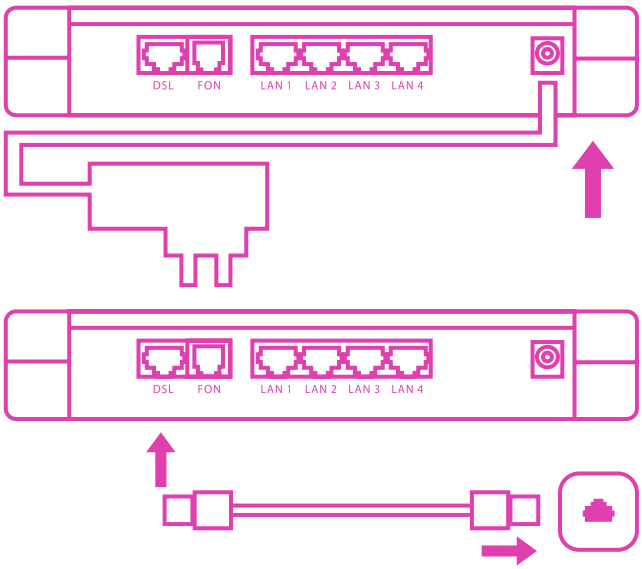

ATTENTION: for privacy reasons we cannot save the equipment settings. If the equipment is replaced, they will not be restored.
Save them in a safe place so that you can restore them yourself.

PORTS

- **DSL:** port for the ADSL/FTTC connection.
- **FON 1:** RJ11 port for connecting an analogue telephone or another analogue terminal device (if provided for by the contract).
- **LAN 1-4:** four Ethernet ports for connecting computers and other network devices.
- **USB:** USB port for sharing local files.

CABLE CONNECTION

- POWER PORT: connection to the mains
  1. Take the power supply provided with the FRITZ!Box router.
  2. Connect the power supply to the power port of the FRITZ!Box router.
  3. Plug the power supply into the mains socket. The Power/DSL light will start flashing.

- ADSL and FTTC:
  1. Connect the wider end of the DSL cable provided (grey) to the DSL port of the FRITZ!Box.
  2. Connect the narrower end of the cable to the telephone socket and wait for the Power/DSL light to turn steady.

Do not disconnect the router from the mains power socket or from the data connection during the activation phase (which may take up to 24 hours from when the device is connected).
